

FOR IMMEDIATE RELEASE

HIGH PERFORMANCE HOMES RECEIVES MARYLAND BUILDING INDUSTRY ASSOCIATION MAX AWARD FOR “OUTSTANDING HOME”

Net Zero Energy Ready Builder Recognized with Best Small Volume Customized Production Home Award

GETTYSBURG, Pa. – May 11, 2015 – [High Performance Homes, LLC](#), a national leader of high performance home building, has received the Maryland Building Industry Association 2014 Maryland Awards of Excellence (MAX) Award for “Best Small Volume Customized Production Home in the \$850-\$999 thousand dollar price range”. The MAX Awards recognize local home builders who provide buyers with excellence in design, livability and value. The program also recognizes excellence in sales and marketing across the home building industry.

Located near historic Gettysburg in the Links-style golf course community, The Links at Gettysburg, the 5,500 square foot single-family detached model home, The Rochelle, employs a comprehensive package of leading-edge high-performance home building technologies. This includes DOW POWERHOUSE Solar Shingles, a geothermal heating and cooling system, energy-efficient appliances, structurally insulated panels (SIPs), and advanced air quality systems. High Performance Homes’ proprietary home automation and energy monitoring technology is also included, enabling complete heating, ventilating, and air conditioning (HVAC) control, as well as remote control of lighting, thermostats, and security from any smart device.

Lori Graf, Chief Executive Officer at the Maryland Building Industry Association, said, “We were very impressed in our tour of the home. High Performance Homes building technologies offer homebuyers an exceptional product compared to other homes we considered in their category.”

Amy Whaley, High Performance Homes Sales and Marketing Director said, “We are honored to be recognized with the MAX award. The award affirms our commitment to excellence in building homes that deliver extraordinary levels of quality and energy efficiency.”

High Performance Homes adds this award to numerous industry-leading accolades. The model home recently received the distinguished U.S. Department of Energy (DOE) Zero Energy Ready Home certification. By exceeding the rigorous DOE Zero Energy Ready Home National Program Requirements, the model home is effectively in the top 1 percent of homes in the nation for outstanding levels of energy savings, comfort, health and durability.

National and regional leaders of the home building, energy, and real estate industries, along with local officials, will gather at The Links at Gettysburg in June for a ribbon cutting ceremony and grand opening celebration of the High Performance Homes model, and to raise awareness for the environmental and consumer benefits of homes built to these stringent standards.

About High Performance Homes

High Performance Homes state-of-the-art technologies are redefining what it means to live the American Dream. Combining revolutionary net zero energy technology, meticulous craftsmanship, and impeccable luxury designs, High Performance Homes is meeting the growing market demand for quality constructed, high-tech, energy-efficient luxury homes.
